MICU | SICU (1 month)  
**Khyber Teaching Hospital Peshawar, Pakistan**

## Other Skills

### Neonatology & Pediatrics

Assessment and resuscitation of new borns both via SVD and C-section, including intubation of flat babies, my special interest was preparation and management of a suspected fetal distress case in labour room specially for mothers who came from villages with no proper care which made our hospital the only available place for them to deliver In case of emergency, that made huge burden of patients coming with fetal demise. Pediatrics we were being rotated in the hospital, for caring different departments on monthly basis, I was in-charge of the pediatrics ward and involved in many procedures done independently.

## Medical

- **Respiratory:** Treatment of acute asthma, acute of COPD, pneumothorax, pneumonia, pulmonary embolism;
- **Gastrointestinal:** Acute upper G.I bleeding, pancreatitis, complicated typhoid;
- **Neurological:** Meningitis, status epilepticus and head injury;
- **Endocrinological:** Diabetic keto acidosis and other diabetic emergencies;
- **Organ Failure:** Cardiac failure and acute poisoning;
- **Myocardial Infarction:** (STEMI, NSTEMI, UA).

## Emergency & Trauma

Motor vehicle accidents interpretation of lab. results, X-Rays (screening patients of tuberculosis), E.C.Gs , arterial blood gases, CT- Scan, MRI, performance of various interventions like passing I/V cannula, N/G intubation, urethral catheterization, lumbar puncture, arterial blood gas sampling,

CPR (Cardio Pulmonary Resuscitation), neonatal resuscitation, intubation treating burnt patients and further referrals treating minor cuts and wounds.

## Gynaecology & Obstetrics

- ERPOC;
- Manual removal of placenta
- Removal of foreign body;
- Lipoma excision
- Assisted vacuum delivery shifting patient in ambulance

## Special Interests

While working in a District hospital in Malaysia with limited resources independently I have gained a very good clinical experience of resuscitation of new borns for four years, that's why I was sent and given a certificate of NRP (Neonatal Resuscitation Program) in 2014, I have worked as a team leader in labour room and dealt many obstetrical emergencies alone, resuscitated many newborns.

As I have worked in far remote areas while dealing, important to mention here, those Indonesian / Philippines mothers living in Sabah Eastern Malaysia, specially in far villages had to pay money because they were non local, and many couldn't pay even admission to the hospitals, resulting in malnourishment and poor prenatal care. I have adopted to work with limited resources efficiently in difficult situations, regarding these and other cases from other places I have attended perinatal mortality and morbidity meetings with state specialists.

## Other Duties

- Looked after admitted patients in the ward including their history taking, clinical examination, investigations, performing diagnostic and therapeutic procedures as above, diagnosis and their treatment;
- Management of acute medical emergencies and performing emergency procedures independently as above if needed;
- Management of patients on OPD basis;
- Teaching on bed side to medical students, nursing staff and paramedical staff; Medical fitness examination of staff and students;
- Referrals through emails to specialists;
- Mortality and morbidity meetings at state level.

■ Additional information can be provided in the interview.

- \* Notice Period: Can join immediately
- \* Golden Visa Holder
