PROJECTS REFERENCE:

1. Review on Statins: Pleiotropic Effects

This review says that therapeutic potential of statins extends beyond lipid lowering. Correctly underlying these pleiotropic effects suggest a new method to prevent and treat wide variety of life-threatening disorders. Thus, statins have added a wide scope of potential targets ranging from acute coronary syndrome to other renal infections and neuroleptic disorders.

2. Review on Errors in Inhalation Technique: Need of Educations and Interventions

This review assesses the quality of inhalation technique in patients and to determine the effect of a single intervention by community pharmacies to improve knowledge of patient regarding use of inhalers in asthma and COPD.

3. Research work Assessment and educational intervention in inhalation techniques among asthma and COPD patients in a tertiary care hospital, Erode, Tamilnadu, India.

Our study concluded that the overall incidents of PDDIS was associated with old age, polypharmacy and increased lengths of hospital stay.

4. An overview of the cardiovascular risk in rheumatoid arthritis

RA is a chronic inflammatory condition, which is associated with significant cardiovascular mortality and morbidity. Cardiovascular burden is significantly increased in rheumatoid arthritis. In addition to RA disease activity control, management of traditional risk factors for CVD is imperative. A multidisciplinary approach should be sought where primary care practitioners, rheumatologists and cardiologists can work together to improve cardiovascular outcomes and reduce mortality among patients with RA.
